About TSIC - TATA Steel Industrial Consulting

Tata Steel Industrial Consultancy (TSIC) is Tata Steel's maiden foray in the consulting space, where our goal is to co-create solutions to complex problems both strategic and tactical in nature, by leveraging more than a century of experience of successfully running India's first mega factory and evolving into a light house of Indian industry today.

TSIC currently has 50+ organizations added to its clientele, and it has been providing organizations with numerous consultation services in the fields of:

About The Program

The Industrial Safety Program involves essential training in risk assessment, equipping employees with the skills to identify and address potential hazards effectively. Additionally, it focuses on the correct utilization of safety equipment, promoting accident prevention and minimizing workplace injuries.

Objectives

- To minimize workplace accidents and injuries for industrial and construction employees through effective risk assessment and safety training.
- To instill a culture where safety is a priority for all employees, promoting active engagement in safety practices and continuous improvement for skilled employees and junior supervisors.
- To improve the awareness towards hazards of industries, transportation and warehouse facilities.
- To help supervisors manage their state safely and develop a safer work environment.

Achieve Industrial Safety Certification
